

Help Shape the Future of Inclusive Play & Therapy

For Parents & Caregivers

Are you a parent or caregiver of a child with cerebral palsy/ neuromuscular condition and interested in toys that are readily accessible for your kiddo? Your voice matters. Share your experience to support the creation of products that are designed with your child's abilities in mind from the start- no adaptations or switches required!

- 3-5 minute survey
- Improve inclusive play & support products that reflect real- life needs
- Designed by a pediatric occupational therapist

For Therapists (OTs, PTs, Assistants)

Hello pediatric therapists! I'm exploring/researching innovative tools that integrate ROM measurement into play-based activities to help improve engagement *and* reduce documentation burden.

If you're interested in having a toy that can track ROM through natural movement, allows for data collection without disrupting the rhythm of play, improves child engagement, and helps streamline documentation, this survey is for you!

- 3-5 minute survey
- Support the creation of new clinical/functional tools
- Help shape functional play

If you know a parent, caregiver, or therapist who would like to contribute in this survey, please pass this along. Together, we can create more inclusive and meaningful play experiences 🤝

Created by a Pediatric Occupational Therapist passionate about accessible design and inclusive play. If you'd like to follow along on this journey, feel free to check out our website at cpcanplay.com.
